Guide for Creating Useful Solution Architectures

The Solution Architect builds a solution to a given problem, with a given set of resources, in a given amount of time. But your organization already has a portfolio of systems, integration protocols and data contexts in place. The Solution Architect must also ensure that the given solution fits within these.

What Is Solution Architecture - A Quick Guide

Solution Architecture and Design Process. The solution architecture and design process phase (see Figure 6.7) determines how to best design the solution, choosing the depth of the project, the schedule, hardware, and software to best satisfy both project and business requirements. This is also where the team determines how the integration (hardware and/or software) of any required physical security subsystem into a single interface can improve efficiencies and decisions and reduce cost and risk.
