Concepts In Biochemistry

Synopsis. The third edition of "Concepts in Biochemistry" makes the most applied and accessible biochemistry text on the market.

Students are more successful with Boyer because it isn't

intimidating and it makes clear the relevance of the material to their

future careers. Like the first two editions, Boyer is written for

students who need an introduction to the fundamental principles of

biochemistry and are preparing for a career in the allied health

sciences, the biological sciences, and ...

Biochemistry Concepts. Biochemistry is the study of chemical

compounds and reactions which occur in living organisms. It

overlaps extensively with organic chemistry since most compounds

in living cells contain carbon. Biochemistry involves the study of

carbohydrates, lipids, proteins and nucleic acids, which are the

types of molecules involved in the chemistry of living organisms.

Biochemistry, study of the chemical substances and processes that occur in plants, animals, and microorganisms and of the changes they undergo during development and life. It deals with the chemistry of life, and as such it draws on the techniques of analytical, organic, and physical chemistry, as well as those of physiologists concerned with the molecular basis of vital processes.
